Japanese Eco-Type Summer Tires: Fuel Efficiency Benchmark

Comparative Performance & Fuel Savings Analysis: Yokohama, Dunlop, Bridgestone & Toyo vs. Continental, Michelin & Goodyear

EXECUTIVE OVERVIEW / APERÇU / ملخص EXECUTIVE

English Summary

Switching to specialized Japanese Eco-Type summer tires (Yokohama BluEarth, Dunlop ENASAVE, Bridgestone Ecopia, Toyo NanoEnergy) reduces rolling resistance by **18% to 25%** compared to standard summer tires. Drivers achieve fuel savings of **45 to 70 Liters** per 15,000 km annually, significantly lowering carbon emissions and total operating costs.

Résumé en Français

L'utilisation de pneu d'été haute efficacité japonais (Yokohama, Dunlop, Bridgestone, Toyo) réduit la résistance au roulement de **18% à 25%** par rapport aux pneus standards. L'économie de carburant estimée atteint **45 à 70 Litres** d'essence ou de diesel pour 15 000 km parcourus par an, réduisant l'empreinte carbone et les coûts.

الملخص بالعربية

تؤدي الإطارات الصيفية اليابانية الموفرة للطاقة (يوكوهاما، دانلوب، بريدجستون، وتويو) إلى تقليل مقاومة الدوران بنسبة **18%** إلى **25%** مقارنة بالإطارات التقليدية. يتيح ذلك توفير **45** إلى **70** لترًا من البنزين/الديزل سنوياً لكل 15,000 كم، مما يقلل الانبعاثات وتكاليف التشغيل.
